

# Logstash: installatie

## context

dit document beschrijft de installatie van Logstash

## vereisten

1. Java: [Java Runtime](#)
2. voeg [ELK stack repository](#) toe
3. [jq](#)

## installatie

1. installeer logstash:

1. YUM:

```
sudo yum install logstash
```

2. APT:

```
sudo apt-get install logstash
```

2. indien /tmp directory mount optie noexec heeft, voer onderstaande stappen uit:

1. open /etc/logstash/jvm.options

2. vervang

1. #-Djava.io.tmpdir=\$HOME door:

2. -Djava.io.tmpdir=/var/lib/logstash/tmp

3. maak de vermelde directory aan en stel toegangsrechten in:

```
mkdir /var/lib/logstash/tmp && chown logstash:logstash  
/var/lib/logstash/tmp && chmod -R 2777 /var/lib/logstash/tmp
```

3. open /etc/logstash/log4j2.properties

1. zet onderstaande lijnen in commentaar (#):

```
rootLogger.appenderRef.console.ref = ${sys:ls.log.format}_console  
logger.slowlog.appenderRef.console_slowlog.ref =  
${sys:ls.log.format}_console_slowlog
```

#### 4. activeer logstash @bootup:

```
sudo systemctl enable logstash
```

#### 5. start logstash:

```
sudo systemctl start logstash
```

#### 6. open /var/log/logstash/logstash-plain.log:

```
[2020-02-10T10:06:04,612][INFO ][logstash.runner] [ Starting Logstash {"logstash.version"=>"7.5.2"}]
[2020-02-10T10:06:05,862][INFO ][logstash.config.source.local.configpathloader] No config files found in path {:path=>"etc/logstash/conf.d/*.conf"}
[2020-02-10T10:06:05,910][ERROR][logstash.config.sourceloader] No configuration found in the configured sources.
[2020-02-10T10:06:06,289][INFO ][logstash.agent] Successfully started Logstash API endpoint {:port=>9600}
[2020-02-10T10:06:11,214][INFO ][logstash.runner] Logstash shut down.
[2020-02-10T10:06:46,106][INFO ][logstash.runner] [ Starting Logstash {"logstash.version"=>"7.5.2"}]
[2020-02-10T10:06:47,326][INFO ][logstash.config.source.local.configpathloader] No config files found in path {:path=>"etc/logstash/conf.d/*.conf"}
[2020-02-10T10:06:47,397][ERROR][logstash.config.sourceloader] No configuration found in the configured sources.
[2020-02-10T10:06:47,823][INFO ][logstash.agent] Successfully started Logstash API endpoint {:port=>9600}
[2020-02-10T10:06:52,730][INFO ][logstash.runner] Logstash shut down.
```

Gezien er nog geen config bestand bestaat, wordt logstash endpoint gestart en daarna terug afgesloten. Dit is NIET de service zelf

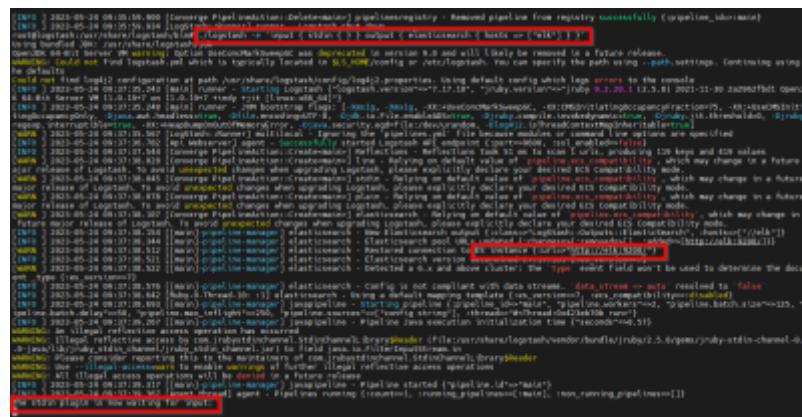

## testen

- voer een eerste pipeline uit waarmee je een tekstboodschap naar output stuurt:

```
cd /usr/share/logstash/bin
sudo ./logstash -e 'input { stdin {} } output { stdout {} }'
<type een willekeurige tekst en sluit af met ctrl,D>
```

- je kan ook de data naar je elasticsearch sturen:

```
./logstash -e 'input { stdin {} } output { elasticsearch { hosts => ["<IP/Hostname>"] } }'
```

- controleer het resultaat in elasticsearch: curl [http://elk:9200/logstash-\\*/\\_search](http://elk:9200/logstash-*/_search)
- met jq kan je het JSON-bestand proper weergeven:curl [http://elk:9200/logstash-\\*/\\_search|jq .](http://elk:9200/logstash-*/_search|jq .)

## configuratie

Ga nu verder met de [logstash\\_configuratie](#)

## meer info
