

VNC console sessie

context

dit document beschrijft hoe je een VNC console sessie aanmaakt.
Hiermee kan je boot problemen troubleshooten alsof je achter de console zit.

stappenplan

1. installeer VNC viewer
2. open de instance
3. **Resources > Console connection**
4. kies: **Create local connection**
5. **Paste public key**: voeg je public key toe,
6. **Create console connection**
7. (wacht op **State**: Active)
8. klik op ... (menu): **Copy VNC connection for Windows**
9. open notepad en plak de string erin
10. voeg de locatie naar je private keyfile toe
11. vervang \$env:homedrive\$env:homepath\oci\console.ppk door het pad van je private key (vb: C:\Users\ikke\PKI\ikke.ppk)
12. open **Powershell** en plak de string erin
13. Open **VNC** en verbind op localhost.

Nu kan je de host herstarten vanuit de web console en het boot proces zien, alsook alle errors die naar stdout worden gestuurd.

```
localhost (QEMU) - VNC Viewer
Stopping Network Configuration...
OK | Stopped Network Configuration.
OK | Stopped target Preparation For Network.
OK | Closed Network Service Netlink Socket.
