

# VCenter server reboot

## context

dit document beschrijft hoe je een VCenter server node herstart

## stappenplan

1. meld je aan op VCenter Server als **administrator**
2. ga naar **Administration > Deployment: System Configuration**
3. **selecteer** de nodes en kies: **REBOOT NODE**

The screenshot shows the 'System Configuration' page. At the top, there are four buttons: 'EXPORT SUPPORT BUNDLE', 'REBOOT NODE' (which has a red arrow pointing to it), 'CONVERGE TO EMBEDDED', and 'DECOMMISSION PSC'. Below these buttons is a table with columns: Node, Node health, Type, Version, and Uptime. One row is selected, showing 'vcenter.legoland.net' with 'Good' health, 'vCenter Server with embedded Platform Services Control' type, '6.7.0.44000' version, and '12 hours' uptime. Underneath the table, there are details for the selected node: Node (vcenter.legoland.net), Version (6.7.0.44000), Replication partner (No replication partner), and Appliance management (with a 'LOGIN' button). The bottom of the page has a 'VIEW A' link.
